From the moment I created my first Hello World application using Python, I got hooked. Instantly after being lost, I knew this was something I'd like to pursue a career in. But programming is more than just a "job" for me. It is a skill that allows me to contribute to something bigger than myself. I am fueled by creating accessible web applications that improve the quality of people's lives.

## PROJECTS

### SneakerLink

09/22 - Present

SneakerLink is a product listing website that fetches products from an API and renders them. With a simple interface, the site allow users to add items to cart and checkout in seconds.

Sneaker

Link

- Built and designed an shoe ecommerce website that renders shoes from an API as the backend.
- Used to the Browser Fetch API to fetch products from the API and stored data in a Pinia store.
- Built a responsive layout to render the data.
- Implement basic filter and add to cart functionality.

### Appypot

08/22 - 08/22

A self-platform landing page for small business owners to grow their business. The landing page includes a blog feature that utilises a headless CMS as it's backend.

Landing page

with cms blog

feature

- Designed the website from scratch using Figma.
- Converted Figma design to a real live website by using JavaScript, Nuxt and TailwindCSS.
- Added a blog page feature using a headless CMS as the posts backend for the website.

### oDelivery

06/22 - 06/22

A delivery startup landing page built to convert visitors into customer. The goal of this landing page is to provide a simple, no-nonsense user experience that highlights the company's products and services.

Delivery

website

- Designed and built a website for a private client and received great feedback for design and usability.
- Added SEO suggestions to improve SEO ranking on popular search engines and increase conversion rate.

## PERSONAL INTERESTS

- In my spare time, I enjoy reading books, listening to music, gaming, and cycling.
